

Cover slabs

Poundfield Precast are able to design and manufacture a totally bespoke solution for concrete cover slabs, where an off-the-shelf option is not available.

We can either work with your own designs and manufacture from your own drawings, or our design team can help create a bespoke solution for you using AutoCAD. Units can be designed to suit loading for all environments.

Typically we supply one piece cover slabs, which can weigh up to 18 tonnes each, but we can also produce slabs which can be slotted together to cover a larger area for easier handling. We are also able to cast in Gatic covers as part of our manufacturing process, which can save additional time and wet works on site.

Surface finishes can be created to a fall, trowelled or a brush finish. We can also complement any cover slab requirements with a suitable ring beam frame to house them in.

We are able to supply cover slabs which comply with Highways Agency specifications.

To find out more or to get a quote for a project you are working on please get in contact with our bespoke department on 01449 723150.
