

RIBA Certified CPD: Platform Lifts

Keeping your CPD points topped up for RIBA just got exciting! Gartec provide **RIBA Certified Interactive CPD (iCPD)** on Lifting Platforms with a virtual reality twist.

Our CPD offers architects in-depth working knowledge of **lifting platforms** and how to specify them, and provides expert knowledge in this niche area.

Our CPD session covers:

- What is a platform lift?
- Cost Benefits
- Regulations and responsibilities
- Common applications and industries
- Platform lift uses and benefits

Virtual reality is about visualization – being able to **see your lifting platform design in action**. We take you on a journey through a traditional Swedish upside down house to try out your lift design and really get a feel for size, operation and application - and even watch some VR telly!

Our CPD helps you **take back control of your building design** - Gartec's unique patented screw and nut driven lifts allows you to position the lift almost anywhere.

Our fantastic cabin lifts run with a single touch **like a conventional passenger lift** – a great alternative for space and cost savings. Our value engineering process really helps you to free up finances for other parts of your project.

Double CPD points from this session tie in with the following subjects:

- Design & Building: Design, Construction, Technology & Engineering
- Compliance: Legal, Regulatory & Statutory Frameworks & Processes

*Fancy a Gartec CPD experience? We can come to your offices any time, or organise a day of seminars at the SkyHouse Design Centre in Amersham. Just give us a call on **01296 397100** or email **jwotton@gartec.com***
