LIGHTING PORTFOLIO

THE VISUAL EXPERIENCE

Landscape Forms believes the goal of outdoor lighting is not to turn night into day, but to provide effective, appropriate, and beautiful lighting that delivers a great visual experience.

LANDSCAPE FORMS LIGHTING: BY DESIGNERS FOR DESIGNERS

We Believe in Design that Excites

We are committed to design that enriches human experience and connects people to nature and each other.

We collaborate with world-class design partners who inspire us, in order to create outdoor lighting that inspires you.

We create unique designs that compliment a variety of architectural styles.

We provide coordinated collections of award-winning lighting and furniture that help express identity and create a sense of place.

We harness the power of design and technology, aesthetics and performance, the rational and the emotional to provide an exceptional visual and human experience.

We Believe in Technology that Excels

LED Light Sources: We employ energy-efficient, long life, low maintenance LEDs and handpick the LED technology best suited to the specific application.

Engineered Arrays: Our luminaires contain LED arrays at custom configured aiming angles that put light precisely where it is needed and control light pollution.

Optical Innovation: Our engineered LED optic devices and diffuser lens materials reduce glare, enhancing visibility and safety.

Color Rendering: Our lights provide excellent color rendering that improves contrast, object detection, and peripheral vision that contributes to the sense of security in public places.

We Believe in Ecology that Sustains

Energy Savings: LEDs typically consume 75%+ less energy to produce the same amount of light as traditional HID light sources, producing fewer carbon emissions. Our light fixtures can be dimmed to provide adaptable light levels, yielding further energy savings.

Dark Sky: Our LED lighting protects “Dark Sky” by delivering the appropriate light levels required for function and safety while avoiding over-illumination and its negative impacts on energy consumption and light spill.

Light Color: We use ecologically appropriate warm-white LEDs (3000k-4000k) to provide illumination that mimics nature at night, supporting the circadian rhythm and melatonin production essential to human and animal health.

Sustainable Materials: Our LED lights are manufactured of aluminum and steel containing pre-and post-consumer recycled material, and contain no mercury, lead, or other hazardous materials.
