# Technical Data Sheet **StoSilent Board 310**

Acoustic panel made of expanded glass granulate for suspended ceiling and wall structures

Area of application	• interior		
	<ul> <li>for suspended ceiling and wall structures</li> </ul>		
	<ul> <li>for the StoSilent Distance acoustic system</li> </ul>		
	<ul> <li>fixing with screws and adhesive</li> </ul>		
Properties	• up to 200 m <sup>2</sup> possible without expansion joint (max. side length: 20 m)		
	<ul> <li>reduction in the reverberation time and noise level</li> </ul>		
	<ul> <li>improved ability to concentrate</li> </ul>		
	<ul> <li>improvement in speech intelligibility</li> </ul>		
	• weighted sound absorption coefficient $\alpha_W$ of up to 0.55 depending on the suspension height		
	<ul> <li>low weight and high stiffness</li> </ul>		
	<ul> <li>low moisture-induced and thermal expansion</li> </ul>		
Format	length x width x thickness		
	• 1200 x 800 x 15 mm		
	• 2400 x 1200 x 15 mm		
	• 1200 x 800 x 25 mm		
Appearance	textured surface		
	<ul> <li>fine graining with the StoSilent Decor M or StoSilent Decor MF finish</li> </ul>		
Information/notes	<ul> <li>use in brine or saltwater swimming pools only on request</li> </ul>		
	<ul> <li>not suitable in splash water zones</li> </ul>		
	<ul> <li>not suitable for radii &lt; 10 m and areas exposed to mechanical stress</li> </ul>		
	<ul> <li>observe installation instructions</li> </ul>		
Technical data			

Criterion	Standard / test specification	Value/ Unit	Notes
Diffusion-equivalent air layer thickness	EN ISO 7783	0.11 m	with coating

	Reaction to fire (class)	EN 13501-1	B-s1, d0	with coating
	Rated value of thermal conductivity $\lambda$	TIAP-655 based on EN 12667	0.08 W/(m*K)	with coating
	Mass per unit area		4.9 kg/m²	
	Bulk density		376 kg/m³	
	Sound absorption coefficient w		0.55	With coating; can vary depending on the suspension height and damping
Substrate	The characteristic values stated are average values or approximate values. Due to the natural raw materials in our products, the stated values can vary slightly in the same delivery batch; this does not affect the suitability of the product for its intended use.			
Requirements	The substrate must be firm	n, dry, clean, and load-	bearing.	
Application				
Application Application temperature	Lowest substrate and app humidity; installation after Rapid shock-type heating formation.	adjusting the equilibriu	m humidity in the	e room.

	StoSilent Decor MF (two spray coatings with 1.3 kg/m <sup>2</sup> in total)
	or
	finish StoSilent Decor M(three spray application cycles with a total of 2.7 kg/m²)
Application	
	The boards should be fixed in longitudinal direction to the carrier profiles to which the StoSilent Profile Tape has been applied. Align longitudinal joints toward the incidence of light. Install the boards with transverse joints that are offset by at least 400 mm.
	Fix the boards with phosphate-treated, quick-assembly screws with a needle point (TN form in accordance with DIN 18182) starting from the middle of the board or a corner in order to avoid compressions. When fixing the screws, press the board firmly onto the sub-construction. Insert the screws approx. 15 mm from the board edge and sink the screw heads to a depth of approx. 1 mm. Ensure a distance of 200 mm between the screws.
	The bonding edges must be free from dust. At the factory, a sealant is applied to the board edges to make them flow-proof. Dust off, paint, or waterproof all edges cut subsequently or on site using the system paint or system adhesive in order for the finished surface to appear homogeneous (closed pores, no visible expanded glass). Mix the system adhesive (StoSilent Fix) in accordance with the application guidelines.
	After fixing the board, apply the system adhesive to the edges (e.g. with a Japanese spatula or cartridge). Press the following board onto the fine grid of the sub-construction, then push it against the already installed boards and fix it with screws.
	Use an electrical keyhole saw, handsaw or surform to cut, grind or plane the material.
	System connections: to enable pressure equalisation between the ceiling cavity and the used space, ensure rear ventilation either through an open, all-around joint or openings in the ceiling. The proportion of the ceiling opening should account for at least 0.8 % of the ceiling surface area. In most cases, this is achieved by an open all-around joint of 2 cm.
	In glancing light the ceilings are not free from visible unevenness.
Cleaning the tools	Remove dust after use.
Notes, recommendations,	Please observe the general Sto application guidelines for Sto acoustic panel

special information,	systems. They are available from Sto SE & Co. KGaA. Installation/coating must only be carried out after prior instruction. If the fine grid (e.g. when retrofitting ceiling installations) is cut through, create additional transition points.Seal the cavities in adjacent walls to prevent low- pressure ceilings. Recommendation: installation on walls outside areas subject to a risk of impact, above a height of 2 m.			
miscellaneous				
	Structural expansion joints must be incorporated.			
Delivery				
Colour shade	visible side: white (approx. RAL 9010), rear side: grey (approx. RAL 7039)			
Packaging	pallet			
Storage				
Storage conditions	Store in dry and frost-free conditions. Product is sensitive to shock; do not subjuit to loads or stress.			
Certificates/approvals
