TOGETHER WE BUILD GREATNESS

ECO-friendly brick slips

For a beautiful and sustainable future

Like you, we want to make the world a better place: more beautiful, more sustainable, more personal. To help achieve this, we not only develop appealing products, but also respect the environment and the society in which we live.

“
Respect for
nature is in
our DNA.
”

It is no coincidence that we are at the forefront of reducing energy and material use. A good example is our latest innovation. Our **ECO-friendly brick slips** are taking us one step closer to a sustainable future.

They are not only very sustainable to produce, in combination with the E-Board® wall insulation system they also meet the high requirements for energy-efficient structures.

And as the icing on the cake, they also have little impact on your budget. With ECO-friendly brick slips the future is bright in every sense. We help you reduce your ecological footprint and give outer walls or interiors personality. Together we build greatness!

Brick slips as ecological first choice

Brick slips are 2 cm thick slips of original facing bricks and as such have the same characteristics as the facing bricks. Moreover, they are lightweight and very easy to use in combination with insulation systems such as **E-Board®**.

70% less raw materials

1kg of raw materials = 1kg of brick slips

waste-free production process

50% less energy consumption

reduced water absorption, prolonged aesthetics

budget friendly

Cladding façades with **cut brick slips** is a sustainable and ecological alternative for the use of traditional brick. Using the same number of bricks, it is possible to cover a larger surface area. There is also more room for insulation. While already a smart and lean building choice, it is possible to be even more environmentally friendly.

Our unique **ECO-friendly brick slips** take efficiency one step further than the current brick slips. Instead of being cut from full bricks, they are formed in special moulds and fired as slips. This results in even less wastage of raw materials and energy. The new ECO-friendly brick slips are a threefold win: ecologically, aesthetically and financially.

Discover a world of new creative possibilities

ECO-friendly brick slips facilitate a new creative evolution in façade and interior decoration. Whether you opt for traditional or modern, the brick look is available in more applications than ever before. Save on energy, the environment and your budget, but not on creativity.

Bring nature inside

With its natural and warm look, brick is finding increasing applications inside the home. With ECO-friendly brick slips, **cladding interior walls** is as easy as it is affordable.

Perfect for prefabrication

Prefabricated constructions? ECO-friendly brick slips are a flexible and financially interesting option as finishing material in any building system.

Greater energy savings

In combination with **insulating exterior wall systems** such as E-Board®, ECO-friendly brick slips can significantly reduce your energy consumption.

All types of bonds

ECO-friendly brick slips fit any structure and unleash your creativity. Difficult bonds no longer pose a problem.

Personal touch

Difficult structures, ceiling cladding and corbelling: personality knows no boundaries with ECO-friendly brick slips.

Enjoy even more unique benefits

- **Aesthetic finish** with endless combinations of colours and bonds. Vertical bonds are also possible, without requiring extra work or costs.
- **Quick and cost-saving installation** on all walls. The brick slips are only 2 cm thick, obviating the need for expensive masonry or adjustment of the foundations.
- **Flexible product** with a wide range of applications. A breathtakingly beautiful brick look is always within reach, even with difficult structures.

The wall is 8 cm thinner, leaving more room for insulation.

Be inspired

ECO-friendly brick slips are available in different structures and colours. In addition to the characteristic, hand-moulded structure, the range also includes the uniquely individual pressed waterstruck brick.

ECO-friendly brick slips are available in 3 sizes:

- **WF** ± 210 x 20 x 50 mm
- **BS** ± 215 x 20 x 65 mm
- **XL40** ± 290 x 20 x 40 mm

Corner slips

For a professional corner finish, opt for the ECO-friendly corner slips. Available in all 3 sizes.

A distinctive format

The creative possibilities of the ECO-friendly brick slips are endless. The standard formats already give your exterior wall or interior a unique look. The long ECO-friendly brick slips add even more character.

An XL40 slip is 29 cm long and only 4 cm high. A slimline format for a minimalist and refined architecture.

The visual effect of this long ECO-friendly brick slip is reflected beautifully **when glued**. The open 3-5 mm joints create subtle shadows that emphasise the horizontal play of lines. But the XL40 is also a good option for brickwork **without header joints**. In this bond, the bed joints of 10-12 mm are retained, while the header joints are reduced by almost abutting the brick slips.

“
The XL40 slips give the wall a neat and refined look.
”

An individual texture

As ECO-friendly brick slips are not the result of curing, they are distinct from brick slips cut from a facing brick. They are produced as slips. But that is not all.

The **waterstruck** version is made in a special press, the turntable press, with a view to using as little raw material as possible. This technique offers an effective solution to today's challenges in the construction sector: dematerialisation, less energy use and lower CO2 emissions.

The clay is pressed through the openings of the turntable and is immediately formed in the format of the brick slip. This also impacts the visible side of the slip: the water-struck texture with its fine vertical grooves is typical of this slip. Pure ceramics with sleek lines.

A weathered look

The ECO-friendly brick slip is an ecological innovation with an old and authentic look. It is this distinctive appearance that distinguishes our brick slips from other materials. Our secret? Tumbling!

The typical reclaimed effect is obtained by tumbling the ECO-friendly brick slips. This technique gives the struck surface of each brick slip its **subtle, weathered look**. This is not the same as the irregular, rough texture of old bricks; the texture of ECO-friendly brick slips is more even and smoother. But the colour refers to authentic bricks, with soft white cement spots refining the basic colour.

The **ceramic quality** of ECO-friendly brick slips is so high that they can be tumbled without risk of damage. The fact that they are so thin is not an obstacle. The tumbled versions are a nice addition to the colour spectrum: Old Copenhagen, Old Hamburg, Old Odense, Old Arhus, Old Roskilde and Old Rostock.

The reclaimed colours are also available in XL40 long format. That even these long and thin brick slips are available as tumbled versions is proof of the high firing quality of the ECO-friendly brick slips.

A sleek waterstruck brick in long format with a weathered look can be called fairly unique and inspires use in **modern architecture to give a quirky and authentic impression**.

“
The reclaimed effect is obtained by means of an inventive tumbling process.
”

AMBITIOUS in brick

It is no coincidence that Vandersanden is introducing the ECO-friendly brick slip. In a little over 90 years, we have become the largest brick producing family business in Europe. Innovation, honesty, trust and respect are at the heart of that success. Our ambition is to create sustainably, fired products that inspire the construction of beautiful buildings, streets and gardens.

“
We produce bricks of a natural beauty that will only become more attractive over the years.
”

E-Board®: brick and insulation in a single product

Vandersanden constantly responds to changing needs in the construction market. E-Board®, high-quality insulation board with brick slips, is a comprehensive product for insulation and renovation of homes, but also a practical solution for insulation in new housing projects. Technology and aesthetics in a single product!

Powerful pavers

Creating a patio or garden path. Paving a driveway. Our collection of pavers no doubt offers you the fired decorative paving that raises your project to a higher level.

Facing bricks

In addition to fired pavers and brick slips, we annually produce over 500,000,000 facing bricks in our nine production locations in Belgium, the Netherlands and Germany. With over 140 colours and numerous formats, we offer creative solutions for every façade.

Signa®: creative façade patterns

An innovative and rapid brick wall cladding system? With Signa® creativity knows no boundaries and the unthinkable becomes possible. For more information, go to www.signapanel.com.

Long-term customer relations

Building long-term and open relations with our customers. Discussing how we can create the right look for projects. Together we build greatness!
