Make Your Roof Unique

Tudor Roof Tile Co. Limited

Located on the Romney Marsh in Kent
Using traditional production skills, our double cambered
clay roof tiles offer a link with the past.

They are particularly suitable for use in architecturally and
aesthetically sensitive areas.

Combining the natural properties of clay, sand facing and individualised hand making, gives our tiles their 'antique' variation.

Starting from a slab of clay, each tile is individually sand faced, shaped, trimmed and nail holes inserted, then placed by hand onto specially shaped drying trays.

Each tile then undergoes a lengthy drying process before being fired (baked) to over 1000°C. Quality inspection and packaging complete the process.

Our tiles are tested to comply with:-

BS EN 538 for flexural strength.

BS EN 539-1 for water impermeability.

BS EN 539-2 for frost resistance.

All above are contained in the CE Marking standard EN 1304

From the initial job enquiry through to the dispatch of the final product, we strive to meet an enviable standard of customer service.

All current testing certificates, terms of business and the product durability guarantee are downloadable from our website-

Our 'Traditional' range of handmade Plain Tiles (nibbed) exhibit a larger degree of double camber and capture the character and much sought after aesthetic qualities of older reclaimed tiles.

Our 'Traditional' handmade Peg Tiles and Oast Tiles are less cambered, and better complement restoration and preservation projects.

New for 2015 is the inclusion of the 'Romney' range of roof tiles. With their gentle camber and fine textured sand face, Romney roof tiles are perfect for town and city roofs alike.
