

Wildflower species – 2021

A mix of sedum for base cover of the M-Tray® modules with a variety of low-growing, perennial wildflower species. These plants are tolerant to dry conditions and suitable for substrate a depth of 100mm.

The wildflower plants will produce flowers up to a height of approx. 50cm and attract bees and butterflies. As it is made up of a wide range of native (& wild origin) flowering species and grasses to maximum diversity and reduce the amount of dead vegetation at the end of the summer.

Wildflowers often take 2-3 years to fully germinate and flower, and some species are viable only as annual and biennial flowers, so new seeds should be broadcast regularly.

Armeria Maritima / Thrift

Flowering period: May to September
Approx. height 25cm

Common Daisy

Flowering period: May to July
Approx. height 25cm

Fragaria Vesca / Wild Strawberry

Flowering period: summer
Approx. height 5cm
