

## Shri Venkateswara Temple - Tividale

Working closely with the client, architect and main contractor, we supplied 2280 bespoke cast stone units of simulated Spanish granite for the construction of a substantial dual-purpose ornamental gateway and accommodation block for the Shri Venkateswara (Balaji) Temple in Tividale, West Midlands.

Over a 12-week period we supplied cast stone features amounting to 182 tonnes in total to meet the required construction schedule. Cast stone was used extensively throughout the ornamental gateway for bands pilasters, plinths, architraves, window and door surrounds all in various sizes and shapes due to the tiered nature of the chola-inspired design. All units were individually marked so that their positions could be determined unambiguously from the unit location plans issued by Procter Cast Stone.
