

Boundary Mill

Eurobond's Rockspan Extra panels have been used within the construction of the new Boundary Mill in Vivary Way, Colne. The £33 million complex which opened in 2008 is the country's first Boundary Mill superstore. The new store is selling clothes, kitchen and home furnishings along with art and crafts materials.

Aztec Industrial Roofing was assigned as the main contractor for the project. Wesley Wilson, Contracts Supervisor, is extremely satisfied with the overall performance of Rockspan Extra saying: "We have used Eurobond products on a number of occasions prior to the Boundary Mills development and are always pleased with the results. The panel system with its interlocking joints are easy to install and maintain, reducing labour costs and build time on site."

Rockspan, with its through fix joint detail allows contractors to utilise the benefits of Eurobond's patented panel lifting clamp when installed horizontally, simple and rapid installation allows for the early commencement of internal works and helps increase internal storage capacity by minimizing secondary steel work.

It's engineered stone wool core provides the panel with excellent fire performance, the Rockspan Extra panel system used within the Boundary Mill project can provide up to 2 hours fire resistance without the need for joint stitching, greatly increasing business continuity and life safety in the event of a fire. This panel type is ideal for large storage applications where limiting fire spread is a priority.

Client: Boundary Mill

Panel Contractor: Aztec Industrial Roofing
