

Plastic replaces timber at primary school

Dilapidated timber at St Mary's Church of England Primary School in Dover, Kent has been replaced with Celuform 150mm white shiplap PVC-ue cladding. The cladding creates a low maintenance deep fascia around the perimeter of the school buildings.

St Mary's has undergone extensive refurbishment including work to the roof, wall panels, windows and electrical systems.

Summers PVC of Maidstone, who installed the shiplap, chose Celuform. James Summers, the company's operations director said, "The most important factor of this job is the quality of the cladding system.

Celuform products are excellent, which is why we have stocked and installed them for more than 20 years."
