

TYLOHELO CASE STUDY - THE LANGLEY HOTEL

Tylohelo completed their installation of extensive thermal features at the prestigious 5 star Langley Hotel in Iver, Buckinghamshire.

The hotel is the former manor house of the Duke of Marlborough and located in 150 acres of gardens and parklands originally designed by Capability Brown.

The Mansion House is Grade II listed so the 1,600 sq metre Spa was created underground.

Our thermal installation comprised two beautiful Hammam, Steam rooms, Saunas, Heated loungers, feature shower and Ice features

BRANDS OF THE SALINA360 GROUP

A. Hammams (and E).

The two Hammams are the outstanding thermal experiences in the spa. Beautifully finished in 20mm thick marble slabs with glass mosaic tiled alcoves, both rooms are stunning. To create the structure to secure the marble slabs Tylohelo designed ingenious fixings alongside the water and vapour proofing. Some of the stone was heavier than can be fixed with adhesive so a carefully faceted structure with external reinforcement was provided.

Heating is discretely routed into the wall, seats, slabs and floor to warm the room. A fog system provides background atmosphere and humidity for massage. A steam generator can provide a full steam environment for flexibility of use.

C. Saunas.

Two types of saunas are provided. The traditional hot and low humidity Finnish style sauna ideally suited to the Salt inhalation via the back lit salt wall and the softer sauna with herbal fragrance, higher humidity and a lower temperature. Subtle hidden LED lighting in bench and backrests.

B. Steam rooms.

Beautiful steam rooms with contoured seats finished in glass mosaic and contemporary large format ceramic to the walls. Subtle wall wash and underbench lighting to create the atmosphere. The Tylohelo "wellness system" of ventilation provides copious amounts of fragrance enhanced steam throughout the room for the best of bather experiences.

D. Heated loungers
Ergonomic relaxation loungers with controlled heating in the slab section finished in glass mosaic.

E

G

E. VIP Hammam

Stunning finishes again with twin slabs in the centre for traditional foam massage and alcoves to enjoy the steam option.

F. Ice features

Two ice features dispense crushed ice into a brass bowl for post thermal cooling prior to relaxation. Quiet ice producing machinery tucked away at high level.

G. Feature shower

With overhead drench and body jets for warming and cooling down.
