**Introduction** Cyclepods believes in attractive, well designed cycle parking and offers a range of stylish solutions. These are available in different colours and finishes and are ideal for different environments & advertising/branding opportunities. Stands do not require foundations.

**Authority** Products are manufactured under ISO 9001 in the UK and meet BREEAM guidelines with many projects achieving BREEAM excellent ratings. Cyclepods is a carbon neutral company and all designs are patent protected.

**Green issues** All products are manufactured from either 100% recycled or recyclable medium density polyethylene (MDPE) in the UK.

Cyclepod believes that the use of recycled materials should not compromise quality and that bicycle parking should encourage cycling and a healthier way of life. Unlike

traditional bike racks, products do not allow overcrowding and as a result do not damage bikes, making them very bike- and cyclist-friendly.

**DESCRIPTION**

The **Cyclepod** is an eye-catching design with 2 locking points and secures 8 bikes in a 2 m dia unit. Ideal for a wide range of clients including offices, hospitals and universities, it is extremely cost effective especially where a shelter is required.

The **Spacepod** is a highly configurable product which uses 50% less space than the traditional bike rack. It offers 2 locking points and is ideal for where space is at a premium such as basement car parks or where only wall space is available. Spacepods can form island units with back to back placement and, with Cyclepods, can

be installed around corners.

The **Streetpod**, a highly secure and stylish product, offers maximum bike protection for public locations, open spaces and secondary education where bike security is a concern. It has the facility to secure the frame and both wheels with a single lock and can accommodate advertising and sponsorship. A range of covers and shelters is available.

The **Minipod**, a fun, colourful and compact design, secures 8 bikes and 8 scooters. Ideal for nursery and primary schools, the Minipod encourages cycling and is attractive to children. A range of covers and shelters is available.

**Minipod Plus** is a more robust version of the Minipod having the same benefits but with the durability required for parks and other public locations.

**SERVICES**

CAD drawings, space planning service and CPDs are available.
